INVITATION

Putting HSE into practice

ANNUAL Task Force ZERO SAFETY CONFERENCE 2010

Esbjerg Performing Arts Center, Denmark
17 March 2010
8.30 am - 6 pm
Welcome

Good results on Occupational Health and Safety are imperative in today’s industrial environment. Gone are the days when accidents were tolerated – we now know that zero accidents are possible and attainable.

Management systems, leadership and commitment, personnel competence, risk management and planning – together with checking and improvement of our processes are the most important elements in creating a zero-accident working environment.

At the fourth annual safety conference we will again present solutions that illustrate the objective of a zero accident work place. Knowledgeable speakers from the industry and from academia will describe their experiences regarding both personal safety and process safety. The conference will inspire you to perform better in your own companies and meet with your peers in the industry. This is your opportunity to meet the experts and to ask questions. In the networking breaks you will have the possibility to network and discuss further.

On behalf of Task Force ZERO it is my pleasure to welcome you to our safety conference in Esbjerg.

Lars Bruvoll,
Chairman, Task Force ZERO
8.30-9.30 Registration, coffee and breakfast

9.30-9.40 Conference opening
Chairman Task Force ZERO, Lars Bruvoll, DONG E&P A/S

9.40-10.15 Incident Free Operations, A Deliberate Act
Incident free operations ARE possible. Working in the most dangerous industry in the world requires the safest environment possible. There are identifiable solutions to dramatically improve the drilling industry toward that objective while enhancing Operational Excellence. This high-energy presentation, filled with entertaining video clips, will look at three industries that started their performance/safety initiatives for the same tragic reasons decades prior to Piper Alpha. The industries that are: commercial aviation, NASA Space Operations and Combat Operations: US Navy Aircraft Carriers. Brian “Bru” Brurud, CheckSix, USA

10.15-10.45 Identical Health Offshore/Onshore – Different Implications
Dr. Aud Nistov is the HSE manager of OLF, the Norwegian Oil Industry Association. Formerly employed with Statoil as medical director, she has a vast experience to draw from when she shares with us some of the burning issues that OLF work with today. HSE Manager Dr. Med. Aud Nistov, The Norwegian Oil Industry Association (OLF)

10.45-11.15 Coffee break

11.15-12.00 StrongBODY – StrongMIND
For Chris Macdonald health is about feeling well. If you feel well we naturally have an energy surplus and the ability to take care and behave safely. When Chris approaches the audience he does this with the purpose of showing that good health is energy and creates the foundation for behaving in a safe and conscientious way. At the safety conference he will build the bridge between fundamental health and the ability to be and react in a safe way. Chris Macdonald, Coach and facilitator, Denmark

12.00-12.30 Fatigue Management, Schlumberger
Fatigue Management is a pragmatic, results-oriented training that covers all aspects of fatigue, from causes to management practices. Schlumberger will introduce how they work with the employees and have empowered them with tools to reduce the negative effects of fatigue. Duncan Lloyd, North Sea HSE Manager, Schlumberger

12.30-13.45 Lunch break

13.45-14.30 Risk perception
You cannot manage risks if you don’t see them. The perception of ‘what is a risk’ is shaped by many more factors than just the probability of a negative outcome times the consequences. Seemingly irrational factors influence the perception. The presentation will give insight on why risk perception is important to take into account in safety initiatives and how it can be manipulated. Besides that Jop Groeneweg will discuss risk taking behaviour in general from various psychological perspectives. Professor Jop Groeneweg, Leiden University, Holland

14.30-15.00 Implementing a Compliance & Leadership programme to improve HSE results
The core of the Compliance and Leadership programme in Statoil is to enable the organization to deliver results to a higher and more stable performance level. The main tool to achieve better performance is to drive through a step by step work process focusing systematically on managing risks and learning by setting the relationship and dependency between the execution of tasks with high precision and professional leadership. Gunnar Breivik, Senior Vice President HSE Statoil, Norway

15.00-15.45 Afternoon break

15.45-16.15 Asset Integrity Performance Indicators: Recent Developments for the Upstream Oil and Gas Industry
Following the 2005 Texas City Refinery incident, much work has been done to progress the realization that a focus on leading indicators to prevent personal injuries will not reveal systemic weaknesses that may lead to a process safety incident. The International Association of Oil and Gas Producers (OGP) has commissioned a task force to determine recommended Asset Integrity KPIs for the upstream industry, to allow industry benchmarking for the first time for the year 2010. This presentation will outline the current work of the task force that has examined, inter alia, the draft recommended practice API 754 with a view to tailoring its recommendations for widespread use in the upstream industry. Brett Doherty, Rasgas Qatar Chairman of the Process Safety subcommittee in OGP

16.15-16.45 Asset Integrity- Process Safety Management-involving the workforce
Systems in themselves do not guarantee safe operations. But it is a good start to have safety critical elements identified and reflected in your maintenance management system. The work force must be involved in developing the systems and understand the importance of maintaining and assuring equipment integrity. Only then can you keep your safety barriers intact and functional at all times. Diederick Bax, Business Development Director, Shell Global Solutions

16.45-17.00 Conclusion
Chairman Task Force ZERO, Lars Bruvoll, DONG E&P A/S

17.00-18.00 Task Force ZERO reception
Motivation
Learn from leading experts and regulators about improvements to process safety and occupational health and safety that you can use in your own business. You will also have an opportunity to question the experts and network with your peers.

Participants
This conference attracts delegates from the offshore industry as well as other industries.

The Task Force ZERO annual safety conference is the leading safety conference organised in Denmark.

You will meet 200 leading managers, experts, academics and authorities from the oil and gas industry and other industries attending this conference.

Venue
Esbjerg Performing Arts Centre
Havnegade 18, 6700 Esbjerg, Denmark

Date
17 March 2010. 8.30 am - 6 pm

Registration
Registration online at the conference site
www.safetyconference.dk

Conference fee and payment
DKK 1,500 (approx. EUR 200€) for the first entrant and DKK 1,000 (approx. EUR 134€) for further entrants.

For members of Danish Offshore Industry or Task Force ZERO: a 10% discount applies.

Registrations will be confirmed by mail from the secretariat. (All prices are excluding VAT).

Deadline for registration is 10 March 2010
